

This is a reply to comments by the ARRL concerning Docket ET 03-104.

I strongly agree with the conclusions reached by the ARRL concerning the effect that Broadband over Power Lines will have on radio communications in the HF and lower VHF spectrum of frequencies.

In researching BPL, I found that the impact it will have is far and above that which is stated by the companies and associations interested only in turning a profit. I urge the Commission to not allow such a system to be implemented.
